

## CC EX 16n – FIRST AID UPDATE- MEDEVACS:

**Task:** To perform triage and to stabilize a casualty in order that they may be rescued to a place of safety and further medical care.

*Photo courtesy of [www.haus-des-meeres.at](http://www.haus-des-meeres.at)*

**Scenario:** The casualty with a painful and swollen foot injury says that he trod on this fish.

- How would you stabilize this casualty?
- What precautions would you take and how would you move the casualty to enable evacuation to a place of safety.
- What aftercare would you provide while evacuating the casualty?
- What information would you provide paramedics on reaching the shore?
