

## CC EX 16p – FIRST AID UPDATE- MEDEVACS:

**Task & purpose:** To stabilize a casualty in order that they may be rescued to a place of safety and further medical care.

*Photo courtesy of [www.stevenwolffinearts.com](http://www.stevenwolffinearts.com)*

The casualty that has been recovered from the water is not shivering but is behaving irrationally and is very cold to touch.

- How would you stabilize this casualty.
- What precautions would you take and how would you move the casualty to enable evacuation to a place of safety.
- What aftercare would you provide while evacuating the casualty.
- What information would you provide paramedics on reaching the shore.
